VAR2-IPPOE White Light	VAR2-IPPOE White Light Datasheet
VAR2-IPPOE Hybrid	VAR2-IPPOE Hybrid Datasheet
DiscoMan	DiscoMan Webpage

Change Detail	
Description of Change	Raytec are announcing an update to the firmware of VARIO2 IPPoE illuminators and a new version of DiscoMan, Raytec's discovery and management tool.
Reason for Change	Potential security vulnerabilities have been removed through changes to the log-in procedures and password requirements on VARIO2 IPPoE firmware and DiscoMan. Full details of the changes can be accessed here. The changes have been implemented to ensure compliance with updates to the PSTI legislation, relating to Cyber Security.
Implementation Plan	All VARIO2 IPPoE products shipped by Raytec from 01/04/25 will have the updated firmware as standard, using serial numbers from 1378450 onwards. DiscoMan version 2.1.0.0 was released in March 2025 and incorporates all changes.
Recommendations	For existing lamps in the field, we would recommend updating the firmware ASAP. The new firmware can be downloaded from the Raytec website via the following links; VARIO2 IPPoE (WL&IR) VARIO2 IPPoE Hybrid
