Change Detail	
Description of Change	Raytec is announcing an update to the cabling options on the URBAN Linear range. The current product is supplied with a twin cable (1 x DALI cable, 1 x mains cable) flying lead as standard. The change will involve combining the flying lead into one single multicore cable to simplify installation. This change does not affect the 'no cable' variants of URBAN Linear. Customers who require this option can specify it using the part code suffix '-NC'. In addition, URBAN Linear products will no longer be supplied with eye bolts (for suspension mounting) as standard, but these will remain available as an optional accessory.
Reason for Change	The change has been made to simplify the installation of URBAN Linear. By switching to a single multicore cable, installers will now only be required to terminate one cable rather than two. The removal of the eye bolts has been based on feedback from customers using alternative mounting methods.
Implementation Plan	All URBAN Linear products shipped on or after 13/03/2026 will incorporate the changes outlined in this document. Updates to the website, datasheets, and other product literature have been made in advance of this date to reflect such changes.
Recommendations	Please speak to your local Raytec Representative to discuss questions or queries.
